EDUCATION

- 2022- 2025**
GUSTO COLLEGE
 - Higher National Diploma in Computing
 - Completed with grade DISTINCTION.
- 2025 - Present**
UNIVERSITY OF SUNDERLAND (PARTNERSHIP WITH GUSTO COLLEGE)
 - Bsc (Hons) Computer System Engineering
 - Currently in Final Semester
- 2026 - Present**
UNIVERSITY OF THE PEOPLE
 - Associate of Science in Business Administration (WSCUC Accredited)

CERTIFICATIONS

- Applied Data Science Specialization (Dataversity)
- Data Science Lab Program (School of Matrix)
- Math Fundamentals for AI and Data Science (Simbolo)
- Data Science Program (Simbolo)
- Fundamental Python Programming (Dataversity)

LANGUAGES

- English (Fluent)
- Burmese (Native)

ABOUT ME

Pre-mid-level Data Science & Engineering Practitioner with a strong technical base in Python, SQL, and MLOps. Experience building and validating machine learning models, creating data pipelines, and deploying applications using Docker and FastAPI. A proactive problem-solver who enjoys bridging the gap between raw data and functional software. Seeking a challenging role to apply my technical and business skills, refine my production-level coding, deliver value within a professional team, to deliver data-driven strategic insights and risk-mitigation solutions within a professional consulting environment.

WORK EXPERIENCE

Nobel Tech IT Solutions

JUN, 2025- DEC, 2025

Recruited part-time during my final engineering year to modernize data deployment workflows under the guidance of the Lead Developer. Bridged the gap between raw Python scripts and production applications by leveraging Docker and FastAPI to standardize environments and automate data delivery. Focused on refactoring legacy code, implementing unit testing, and enhancing system reliability across the department

GUSTO Innovation Bootcamp

OCT, 2024- FEB, 2025

- Product Leadership:** Spearheaded "Easy Eat" from ideation to a functional prototype for a high-stakes innovation competition.
- Team & Roadmap Management:** Led a cross-functional team, managing user experience (UX) and technical requirements under strict deadlines.
- Stakeholder Communication:** Pitched technical architecture and business metrics to expert judges, translating complex data solutions for stakeholders.

SKILLS

- Languages & Core Software Engineering:** Python, Java, R, SQL, Git, Linux / Bash, OOP (Object-Oriented Programming), SOLID Principles, PEP 8 Standards, pytest, Excel
- Data Science, AI & Machine Learning:** Scikit-learn, LinearRegression, Logistic Regression, Random Forest, XGBoost, K-Means Clustering, PCA (Principal Component Analysis), PyTorch, LangChain, RAG (Retrieval Augmented Generation)
- Data Engineering, Databases & MLOps:** Pandas, Polars, NumPy, ETL Pipelines, Database Design, Schema Design, MySQL, PostgreSQL, Oracle, ChromaDB, Docker, FastAPI, MLflow
- Analytics, Visualization & BI:** Power BI, Business Intelligence, Trend Forecasting, KPI Tracking, Streamlit, Matplotlib, Seaborn
- Soft Skills & Business Skills:** Leadership, Logical Thinking, Creativity, Teamwork, Communication, Problem Solving

TECHNICAL EXPERIENCE

Nobel Tech IT Solutions

Project 1: Internal Predictive Analytics & Deployment Engine

Technology: Python, FastAPI, Docker, PostgreSQL, Scikit-Learn, Bash, pytest, PEP 8

- API & Infrastructure: Migrated legacy Python scripts into a centralized, production-ready RESTful API using FastAPI and standardized multi-stage Docker environments to eliminate "dependency hell."
- Optimization & Data Engineering: Optimized PostgreSQL queries via strategic indexing and caching, slashing peak-hour data retrieval latency by 40%.
- Automation & Testing: Developed Bash and Cron automation infrastructure for daily data extraction and model retraining loops, ensuring code quality with pytest and PEP 8 tracking.

Self Directed

Project 2: Smart Expense Anomaly Detector

Technology: Python, Streamlit, Scikit-Learn, Pandas, Plotly, NumPy

Project Link: <https://philip12-html-smart-expense-anomaly-detector.streamlit.app>

- ML Pipeline: Built an unsupervised pipeline (Isolation Forest, One-Class SVM, LOF) with StandardScaler data normalization to isolate anomalous financial spending patterns.
- Feature Engineering: Solved the lack of historical fraud labels by designing a statistical ground-truth baseline generation method (Mean + 2 Std Dev) for model evaluation.
- State Management & UI: Architected a reactive Streamlit dashboard with interactive Plotly timelines, using `st.session_state` to cache ML assets and achieve zero UI rendering latency.

Project 3: Credit Card Fraud Detection System

Technology: Python (Flask), Scikit-Learn, XGBoost, Random Forest, SMOTE, HTML/CSS/JS

Project Link: <https://fraud-detection-a8c9.onrender.com>

- Full-Stack ML Architecture: Developed an end-to-end classification system combining a Flask RESTful API with an HTML/JS dashboard capable of sub-second real-time and batch CSV transactions.
- Imbalance Handling: Handled severe class imbalance using SMOTE oversampling, benchmarking baseline models against optimized XGBoost and hyperparameter-tuned Random Forest.
- Heuristic Optimization: Programmed a post-processing "Smart Boost" logic layer mapping transaction value, geography, and time context, successfully reducing false-positive rates by 25%.
